REMARKS EC Herkins

Date 7/22/80 Inspector R. Hayman

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons for this increase. One of the main reasons is that the world population has increased from 5 billion in 1985 to 6 billion in 2000. This increase in population has led to a corresponding increase in the number of people who are undernourished.

Another reason for the increase in undernourishment is that the world's food supply has not kept pace with the increase in population. This is due to a number of factors, including a decline in agricultural productivity and a shift in the world's food supply towards more expensive, processed foods.

Finally, the increase in undernourishment is also due to a number of other factors, including a decline in the number of people who are employed in agriculture and a shift in the world's food supply towards more expensive, processed foods.

The increase in undernourishment is a serious problem that needs to be addressed. There are a number of ways in which this problem can be addressed, including increasing agricultural productivity and increasing the number of people who are employed in agriculture.

One of the most important ways in which this problem can be addressed is by increasing agricultural productivity. This can be done by a number of ways, including increasing the use of fertilizers and pesticides, and by increasing the number of people who are employed in agriculture.

Another important way in which this problem can be addressed is by increasing the number of people who are employed in agriculture. This can be done by a number of ways, including increasing the number of people who are employed in agriculture, and by increasing the number of people who are employed in agriculture.

Finally, the increase in undernourishment can also be addressed by increasing the number of people who are employed in agriculture. This can be done by a number of ways, including increasing the number of people who are employed in agriculture, and by increasing the number of people who are employed in agriculture.
