Final OK

REMARKS OK - receptical not
grounding. House final
OK

Date 8/6/80 Inspector R. Wayman

the 1990s, the number of people in the world who are illiterate has increased from 1.2 billion to 1.5 billion. The number of illiterate people in the world is expected to reach 1.8 billion by the year 2015 (UNESCO, 2003).

There are many reasons for the increase in illiteracy. One of the main reasons is the rapid population growth in the developing countries. Another reason is the lack of investment in education. In many developing countries, the government does not spend enough money on education. This means that there are not enough schools and teachers. As a result, many children do not go to school. In addition, many children who do go to school do not stay in school for long. They drop out of school because they need to work to help their families. This is especially true for girls. In many developing countries, girls are often forced to work or get married at a young age. This means that they do not have time to go to school.

Another reason for the increase in illiteracy is the lack of resources. In many developing countries, there are not enough books and materials. This means that even if there are schools, the quality of education is poor. In addition, many people do not have access to the internet or other modern technologies. This means that they do not have the opportunity to learn from these resources. As a result, the number of illiterate people continues to increase.

The increase in illiteracy has many negative effects. One of the main effects is that it limits the economic growth of the country. Illiterate people do not have the skills and knowledge needed to work in modern industries. This means that they are often employed in low-paying, unskilled jobs. As a result, the country's economy does not grow as fast as it could. In addition, illiterate people are more likely to be poor and live in poor conditions. This means that they do not have access to basic services like health care and education. As a result, the quality of life is low for many people in developing countries.

There are many ways to reduce the number of illiterate people. One of the most important ways is to invest in education. The government should spend more money on building schools and hiring teachers. This means that more children can go to school. In addition, the government should provide resources like books and materials. This means that the quality of education can be improved. Another way to reduce illiteracy is to provide training for adults. This means that people who are already illiterate can learn to read and write. This is especially important for women, as it can help them to find better jobs and improve their lives.

In conclusion, the number of illiterate people in the world is increasing. This is a serious problem that needs to be solved. The government and other organizations should invest in education and provide resources to help people learn to read and write. This will help to reduce the number of illiterate people and improve the quality of life in developing countries.
