FIRE GUARD FASHIONTONE

Armstrong Fire Guard Fashiontone is a fire-resistant acoustical lay-in ceiling system which offers rated fire protection of the structural components of the building. In combination with the floor structure, this ceiling helps check the further spread of fire by resisting the dangerous transmission of heat from one area to another.

ORDINARY GRID AFTER A FIRE

FIRE GUARD GRID AFTER A FIRE

Ordinary grid buckles under heat, and lay-in panels usually fall within minutes—exposing any floor structure to the fire. Fire Guard Fashiontone grid prevents this from happening. Under heat, special fittings in the grid allow the main runners and cross-tees to expand without buckling. Because the grid does not buckle or twist out of shape, special Fire Guard ceiling panels remain in place, and the fire is prevented from spreading to the area above for a rated period of time.

Armstrong has pioneered fire-resistant ceilings for large commercial installations. With the introduction of new acoustical Fire Guard Fashiontone panel and special grid system, this same protection is available

for light commercial and residential installations at a low cost. Additionally, Underwriters' Laboratories have tested the Fire Guard Fashiontone Ceiling and have given it a 1-1/2 hour fire-resisting performance for use in building on floor-ceiling construction.

The clean lines and technical design of the Fire Guard ceiling pictured above contribute greatly to the modern appearance of the room. Fire Guard is not only a safe ceiling, and acoustical, it's beautiful, too. So if you're thinking about putting up a ceiling—whether for a store, office, or residence—think about Fire Guard—Fire Guard Fashiontone Ceiling by Armstrong.
