LOAD AND SUPPORT: Your deck will support a 69 PSF live load. Posts have 0" below-ground post support.

DECK AND POST HEIGHT: You selected a height of 24" from the top of decking to level ground. The top of the deck support posts will therefore be 15.25" above ground level. Your salesperson can provide information for uneven or sloped ground.

JOISTS: Set joists on top of beams, 16" center to center.

NOTE: The design may require knee braces and bridging between joists. Your materials list includes the necessary items. The suggested design is not a finished building plan. You are responsible for all measurements being correct, for verifying that the design (and any substitutions or modifications that you make) meets all local building codes and requirements. To verify that the suggested design, and any substitutions or modifications, is consistent with conditions at the construction site, review the design with your architect. Also consult your architect for proper construction and use of materials in the structure.

Be sure to follow the deck construction detail available from your store salesperson.
