RE: SPEEDWAY UNIT NO. 1505
904 SCOTT STREET
NAPOLEON, OHIO

Dear Mr. Gerken:

TolTest, Inc. (TolTest) Toledo, Ohio, in conjunction with Emro Marketing Company (Emro), is conducting a subsurface investigation at the above referenced site. This investigation is required by the State Fire Marshal, Bureau of Underground Storage Tank Regulations (BUSTR). In order for Emro to fully comply with BUSTR, soil borings/monitoring wells are required to be drilled in the alley to the south of the Speedway station and in the right-of-way of Scott Street to the west and south of the project site.

Please find enclosed a site map with the area of the proposed boring locations marked. The drilling will be accomplished with the use of a geoprobe mounted on an all-terrain vehicle (ATV). The geoprobe boring, one inch in diameter, is designed to minimize intrusion into the ground surface. The boreholes are temporary and will be utilized to collect soil and ground-water samples at the time of drilling. Permanent features will not remain and the borehole will be backfilled with bentonite chips and patched to match the existing surface, at the time of drilling. Therefore, a cross section diagram of the borehole has not been included.

The date of the drilling activities has not been established. It will occur as soon as all off-site access has been attained. TolTest estimates that the work will begin during the month of March, 1994.

The duration of the field activities for this project is expected to be one day. Future phases of the project may or may not occur. TolTest will notify the City of Napoleon if this occurs.

Mr. Marc Gerken
City Engineer

Project No. ES-16049
