The above slopes are minimum, and are required for structural safety. The maximum slope is 2 inches per foot.

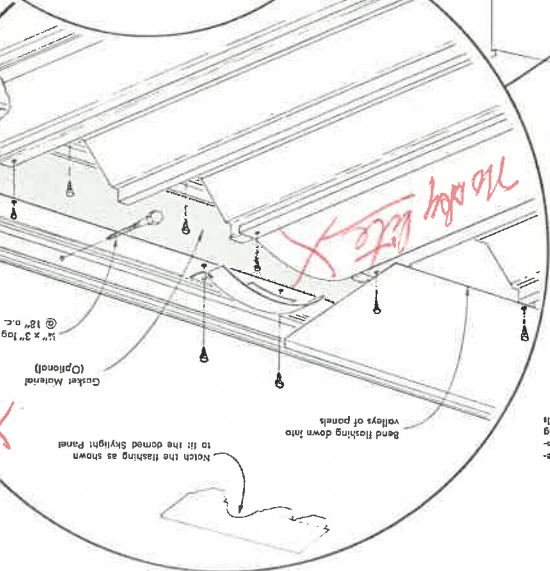

TWO METHODS ARE POSSIBLE:

1. Two-vee panels will slide easily into position as shown in diagram #1, when panel B is raised slightly.
2. Alternatively, panels may be interlocked as shown in diagram #2. Panel B should remain interlocked so that Panel A and Panel C may be raised to insure a complete interlock. Pressure in the direction of the arrow will snap the panels together.
